Parramatta Chest Clinic makes appointment for you to come, and will email you about this appointment

Appointment date arrives and you come for a nurse assessment and to do a recent Chest X Ray (this means a Chest X Ray in the last 3 months). You can bring one with you if you have one from the past 3 months. It will be an IGRA blood test for patients under 16 year old, which will be done at Westmead Children's hospital.

This assessment and Chest X-Ray goes onto a waitlist (a line) for the doctor to review. This is reviewed by the doctor 8-12 weeks after your nurse assessment.

The Chest Clinic will contact you with the outcome of that doctor's review. Most likely further investigations will be required.

If further investigations are required, you need to first attend to these before we can update HAP (this is the online system used by BUPA)

Once we can rule out active TB, we update HAP
